

Invented for life

Recording professional conference meetings

An integrated solution
by Bosch and Arbor

Challenges

Once a professional meeting is finished, it's important to have quick access to the audio and/or video recording and to be able to identify what each participant had to say per topic, keyword or agenda item, as well as the ability to publish the meeting for your audience easily.

Market requirements

The archive should make it easy to find content such as audio, video and data per keyword, agenda item or person.

In partnership with

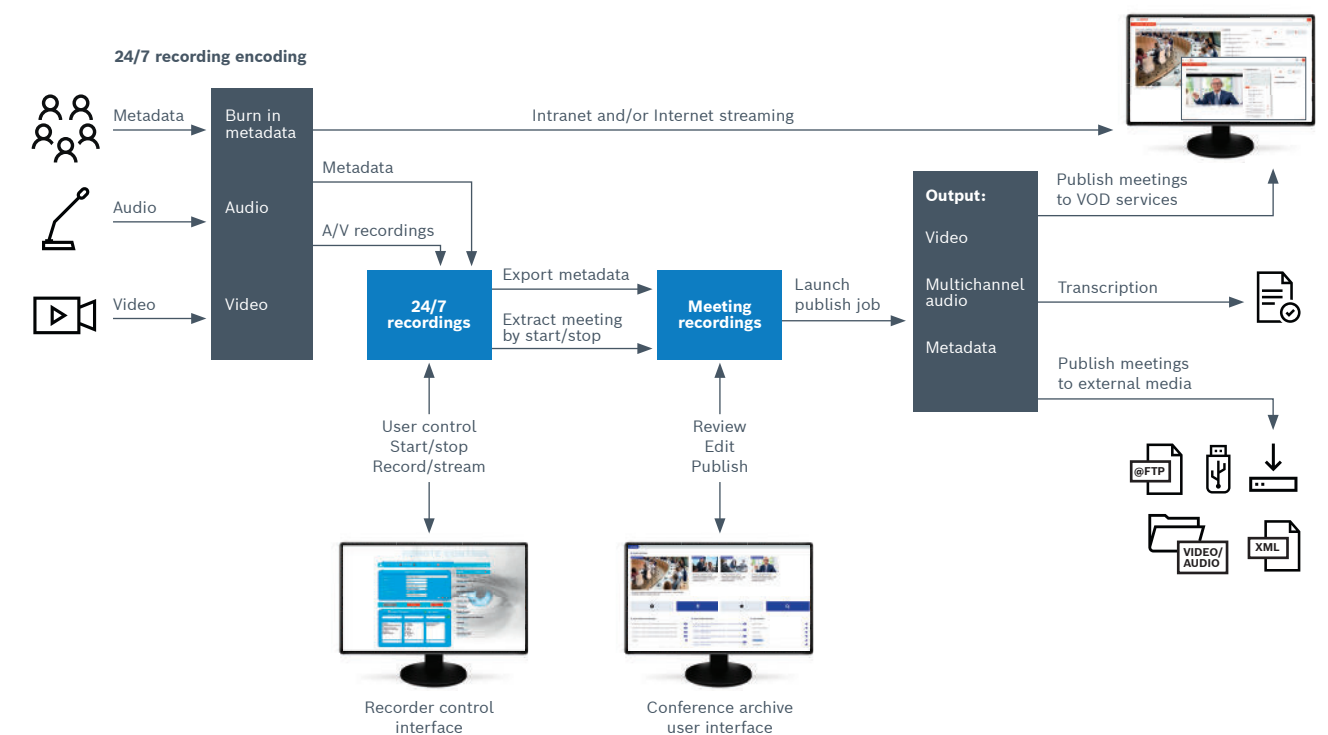

Our solution: seamless integration

Bosch and Arbor deliver a high-quality solution consisting of a Bosch conference system seamlessly integrated with the Arbor recording and archiving system, to record audio of all delegates, capture their video images and record the original audio and interpretations. As metadata from the Bosch conference system is shared with the Arbor recording, the name, country, political party of the delegates are all stored, along with the agenda and voting sessions. The recordings of conferences can be stored at a local server or in the cloud. All data can be shared on webcasting services, for example on Arbor's ConnectedViews.

DICENTIS is a highly secure and extremely versatile conference system that offers solutions for different application areas, from small local events to huge international summits. Based on the application type, the number of seats and the required system functionalities, you can choose the right conference solution for all your customers.

Arbor offers products and solutions for managing, recording and distributing audio and video solutions for a diverse customer base. We have provided efficient, user-friendly, state-of-the-art solutions to parliaments, court rooms, broadcast stations and other professional organizations.

System example for professional meetings:

The IP-based DICENTIS Conference System from Bosch and the Arbor recording and archiving software are digitally interfaced by using the TCP-IP API protocol and DANTE™ audio technology.

Benefits of the Bosch/Arbor integrated solution

For the system integrator/installer:

- ▶ Seamless integrated solution with our official Integration Partner Arbor
- ▶ Tested and approved solution offers peace of mind
- ▶ User-friendly and custom-configurable solution with complementary features depending on the customer's needs
- ▶ Easy to install and configure

For the end user (chairman and participants):

- ▶ High speech intelligibility ensured by superior, latency-free audio
- ▶ Record all multilingual audio channels, video and metadata
- ▶ Web portal available in multiple languages
- ▶ Recording of multiple rooms simultaneously
- ▶ Easy to find content such as audio, video and data per keyword, agenda item or per delegate
